WINSTON-SALEM, N.C. — The store of the future is open at Mayfair Mall, where nearly every retail operation has been replaced by a giant, computer-operated display system. The system, which is controlled by a central computer, is designed to provide shoppers with a more efficient and enjoyable shopping experience.

The new display system features touch-sensitive screens that allow customers to select products and view information about them. The system also offers personalized shopping recommendations based on customers' previous purchases and browsing history. In addition, the system provides real-time inventory information, allowing customers to quickly check product availability before making a purchase.

The new display system is expected to increase customer satisfaction and drive sales growth for the stores at Mayfair Mall. The store of the future is just one example of how technology is transforming the retail industry and providing new opportunities for businesses to innovate and thrive.
